

## WHAT IS CLAIMED IS:

1. A mini case for computer comprising a front panel, a rear panel, support frames, a case, and a handle set, wherein,

the case with a ventilation opening formed on a lateral thereof and  
5 with a groove formed on a top and a bottom thereof, wherein two  
screwed holes formed each end, each fastened a locking plate with  
screws;

two supporting frames formed inside the case as a fixture for  
securing a circuit board, without a bottom plate; a fan formed right  
10 behind the ventilation opening to blow heat out of the circuit board;  
supporting frames, with guiding blocks formed thereof, can be guided  
through a space and fixed in the case;

an inner panel, with inner sockets connecting to the circuit board,  
formed behind a front panel, thereby plugging can be made from the  
15 front; a rectangular opening formed on each end of the inner panel,  
wherein a convex and a groove formed, to be engaged with a hole and  
a projection on a lid, thereby the lid can move in and out the groove and  
rotate to open and close;

a handle formed in the groove of the case; a sliding groove formed  
20 on an extension of the handle; a screw penetrating a fastener and the

sliding groove to engage with a bolt penetrating the groove of the case, thereby securing the handle in place and restraining the handle moving within the sliding groove; a spring with an end connecting to an end of the handle and with the other end connecting to the fastener, thereby an  
5 extension or a retraction can be made when pulling or releasing of the handle.
